What is it?

The screenshot displays a web-based astronomical software interface. At the top, there is a navigation bar with options: Home, Explore, Guided Tours, Search, Communities, View, and Settings. On the right side of this bar are buttons for 'Install Windows Client' and 'Sign Out'. Below the navigation bar, a 'Collections > All-Sky Surveys >' section features a row of ten survey thumbnails: Tycho (Synthetic), USNOB: US Naval, GALEX 4 Near-UV, GALEX 4 Far-UV, GALEX (Ultraviolet), RASS: ROSAT All, Fermi LAT 8-year, GLIMPSE 360, GLIMPSE, GLIMPSE/MIPSGAL (highlighted), and Big Picture. On the left, a 'Layers' panel lists celestial objects: Sun, Mercury, Venus, Earth, Mars, Jupiter, Saturn, and Uranus. The main viewing area shows a multi-wavelength star field with a mouse cursor pointing at a red star. A central text overlay reads: 'What can  humans +  computers teach each other about the Universe?'. Below this, a 'ZOO NIVERSE' logo is visible. At the bottom, there are several control panels: 'Look At' (set to Sky), 'Imagery' (set to Digitized Sky Survey (Color)), 'Image Crossfade' (a slider), 'Tracking' (set to GLIMPSE/MIPSGAL), a coordinate display (RA: 16h12m06s, Dec: -52:15:18), and a time display (02:46:40). A row of ten star field thumbnails is also present at the bottom, including Ant Nebula, The Ant Nebula, RCW 103, NGC6115, Eta Normae, Gamma1 Normae, Gamma2 Normae, HR6022, HR6059, and HR6083.

The Physical Properties of Large-Scale Galactic Filaments

Catherine Zucker, Cara Battersby, Alyssa Goodman

(Submitted on 27 Dec 2017)

The characterization of our Galaxy's longest filamentary gas features has been the subject of several studies in recent years, producing not only a sizeable sample of large-scale filaments, but also confusion as to whether all these features (e.g. "Bones", "Giant Molecular Filaments") are essentially the same. They are not. We undertake the first standardized analysis of the physical properties (densities, temperatures, morphologies, radial profiles) and kinematics of large-scale filaments in the literature. We expand and improve upon prior analyses by using the same data sets, techniques, and spiral arm models to disentangle the filaments' inherent properties from selection criteria and methodology. Our results suggest that the myriad filament finding techniques are uncovering different physical structures, with length (11–269 pc), width (1–40 pc), mass ($3 \times 10^3 M_{\odot}$ – $1.1 \times 10^6 M_{\odot}$), aspect ratio (3:1 – 117:1), and dense gas fraction (0.2–100%) varying by at least an order of magnitude across the sample of 45 filaments. As part of this analysis, we develop a radial profile fitting code, *RadFil*, which is publicly available. We also perform a *position – position – velocity* ($p - p - v$) analysis on a subset of the filaments and find that while 60%–70% lie in the plane of the Galaxy, only 30–45% also exhibit kinematic proximity to purported spiral arms. In a parameter space defined by aspect ratio, temperature, and density, we broadly distinguish three filament categories, which could be indicative of different formation mechanisms or histories. Highly elongated "Bone-like" filaments show the most potential for tracing gross spiral structure (e.g. arms), while other categories could simply be large concentrations of molecular gas (GMCs, core complexes).

Options

The screenshot displays the glue software interface with several windows. The '2D Image' window shows a plot of Galactic Latitude (0°00' to 45') vs. Galactic Longitude (340°00' to 337°30') with a horizontal selection band. The 'Custom Slice' window shows a 3D view of the data with axes for Pixel Axis 1 [y] and Pixel Axis 2 [x]. The 'WorldWideTelescope (WWT)' window shows a zoomed-in view of the selected region with a red outline. The 'Profile' window shows a histogram of the data with a vertical line indicating the slice position. The left sidebar contains data collection and plot options for the Nessie dataset.

Literature as (a filter for) Data

A screenshot of the Aauthorea web interface. The text in the document reads: "As such, it makes sense for us to attach our images to locations. The AstroExplorer tool (cite) and the ADS All Sky Survey can allow images to be treated as data, in the sense that they can be "put back" on the Sky in context. Here's a sample, using an image from Barnard that is 100 years old (update). Click the caption's link to see it on the Sky in WorldWide Telescope." Below the text is a dark astronomical image of a star field with a prominent nebula. The caption below the image reads: "Fig. 7" and "Click here to see this image on the Sky in your browser (using HTML5 WorldWide Telescope). Original image source." The Aauthorea interface includes a top navigation bar with "Aauthorea Beta" and "HELP EXPLOR", and a rich text editor toolbar.

A screenshot of the ADS All Sky Survey web interface. The page title is "The ADS All Sky Survey". The interface features a search bar with "rho oph" entered and a "Show Sources" button. Below the search bar are filters for "Object" (Stars, Galaxies, Hill regions, Nebulae, Other), "Band" (Radio, Infrared, Ultraviolet, X-ray), and "Year" (Harvard/All). A "BACKGROUND LAYER" section includes "Optical", "2MASS", "WISE" (selected), "SFD", "IRIS", "GLIMPSE", "H-alpha", "ROSAT", "Fermi", and "VLSS". The main display is a star field with red dots overlaid on a blue and green background. At the bottom, it shows coordinates "(α, δ) = 251.81°, -22.91° FOV = 18°" and a footer that reads "ADS All-Sky Survey is a NASA-funded project (+)".

5.3.3 Putting Images in Context

Most observational astronomy has the unique feature of having a specific space to which the data are attached: the celestial sphere. As such, it makes sense for us to attach our images to locations. The AstroExplorer tool (cite) and the [ADS All Sky Survey](#) can allow images to be treated as data, in the sense that they can be "put back" on the Sky in context. Here's a sample, using an image from Barnard that is 100 years old (update). Click the caption's link to see it on the Sky in WorldWide Telescope.
